

Same body motion. Different consequences.

Experience binds a command to what the object will do. The existing field learner uses that distinction.

Matched physical interventions; body displacement = (0, 0).

40 held-out seeds · 8,960 target trials · 6,400 source transitions · 640 separate probe interventions

All failures included. Supplied actuator, geometry, equivariance and two-step horizon. Frozen and scalar rows are diagnostics. No new agent machinery.
